Product Item Sync.....	3
Example Data	4

Overview

The product item sync is used to export product item information for all product items within the database. This is a cumulative file, not an incremental file. Custom field data can be included or omitted, as this is a configurable option.

Custom field data can be included or omitted, as this is a configurable option. Column order of custom fields is fixed, but defined by the sync process. Custom fields added later are not necessarily appended to the end of the custom field column order. New custom fields may appear at the beginning, between previously existing, or at the end of the custom fields. Any system-level custom field changes necessitates re-verification of sync data, by data consumers if column order is a dependency.

Upon each execution, all current member information is extracted and the completed file is then FTP'd to the predetermined location.

Product Item Sync

Name	ProductSyncYYYYMMDDHHMMSS.txt
Format	Pipe delimited
Frequency	Daily
Source	ALP SaaS
Contents	<ul style="list-style-type: none"> All product items Custom Fields listed after "Drop From Basket" field if enabled in sync settings.

Field Name	Type	Description
Product Item Id	Numeric(10)	SB Internal Product Item Id
Product Item Name	String(120)	Product Item Name
Product Item External Reference	String(20)	
Zero Points	Numeric(2)	If enabled, points will not be earned for this product item. 0 = Disabled -1 = Enabled
