Reward Type Sync.....	3
Example Data	3

Overview

The Reward Type Sync is used to export current details of reward types that can be issued within the database.

Upon each execution, all reward types will be included with current information. Files can optionally be split into X records per file, which are then FTP'd to the predetermined location. Files can be compressed and/or PGP encrypted prior to being transferred.

Reward Type Sync

Name	Standard_Reward_Type_Sync_{Database #}_{Sync Id}_YYYYMMDDHHMMSS.txt Or Standard_Reward_Type_Sync_{Database #}_{Sync Id}_YYYYMMDDHHMMSS_{File Number}.txt Max records per file option
